PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in CI/CD pipelines, containerization, and cloud infrastructure on AWS. Comfortable working with Kubernetes, Terraform, Ansible, and GitHub Actions. Completed a Nano Degree program at Digilians with a production-grade capstone project on AWS. Eager to contribute to real-world engineering teams and continue growing in cloud-native environments.

EXPERIENCE

DevOps Specialist, Digilians – Digital Pioneers Initiative 01/2026 – 06/2026

- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions to automate build and deployment workflows.
- Containerized multi-service applications using Docker for consistent deployment across environments.
- Provisioned AWS infrastructure (EC2, S3, VPC, IAM) using Terraform.
- Worked with Kubernetes to deploy and manage containerized workloads.
- Automated server configuration using Ansible playbooks.
- Applied Linux administration practices including SSH management and access control.

TRAINING & COURSES

CCNA Training, NTI 01/2025 – 03/2025

Configured VLANs, DHCP, OSPF, switching and routing across simulated Cisco network topologies using Cisco Packet Tracer.

Networking Training, Petrojet 07/2022 – 08/2022

Gained hands-on experience configuring enterprise switches and routers in a corporate network environment. Red Sea

Cloud Computing Training, ITI 09/2021 – 01/2022

Studied cloud computing fundamentals, virtualization, and IaaS/PaaS/SaaS service models across a 4-month intensive program. Assiut

EDUCATION

Bachelor of Computers and Information Sciences, 2019 – 2023

Software Engineering – Assiut University

GPA: 3.74 | 4.0

PROJECTS

ShopVerse – High-Availability E-Commerce Platform on AWS,

Capstone Project – Digilians Nano Degree | Team: AutoOps

- Built a three-tier e-commerce platform (React frontend, Go backend, MySQL on RDS) deployed on AWS EKS.
- Provisioned infrastructure using Terraform across three layers: bootstrap, core (VPC, EKS, RDS), and platform services.
- Set up GitOps delivery using GitHub Actions + ArgoCD with a manual approval gate before production deployments.
- Integrated Trivy security scanning into the CI pipeline as a mandatory delivery gate.
- Configured monitoring stack using Prometheus and Grafana via kube-prometheus-stack.
- Managed application secrets using AWS Secrets Manager and External Secrets Operator.

Banking Platform on Kubernetes, Digilians Nano Degree

- Deployed a production-style three-tier banking application on a local Kubernetes cluster (1 control plane + 2 worker nodes).
- Configured NGINX Ingress with TLS, PostgreSQL StatefulSet with persistent volumes, and HPA auto-scaling.
- Applied RBAC least-privilege access and NetworkPolicies for pod-level security.
- Set up Fluentd DaemonSet for log collection.

Task Manager – Full Stack Docker App, Digilians Nano Degree

- Built a containerized task manager using Docker Compose with Nginx load balancing across two Flask workers.
- Added PostgreSQL database, Redis caching layer, and HTTPS/SSL termination.
- Used multi-stage Dockerfile to reduce image size and ran all services as non-root with health checks.

Real-Time Sign Language Translation System, Graduation Project

- Developed a real-time sign language recognition system aimed at bridging communication between deaf/hard-of-hearing individuals and the general public.
- Built a machine learning model using Python and OpenCV to recognize hand gestures and translate them into text.
- Trained and evaluated the model on a custom gesture dataset as part of the graduation project requirements.

Arduino-Based Temperature Monitoring System

- Developed an embedded monitoring system using Arduino UNO that samples temperature every 5 seconds and displays real-time readings on an LCD screen.
- Engineered automated threshold-based alert notifications for high-temperature conditions, triggering instant warnings when limits are exceeded.

Virtualized Server Deployment, ITI

- Deployed and configured virtualized infrastructure using VMware and Citrix XenServer, simulating an enterprise environment with 4+ interconnected virtual servers.
- Configured Microsoft Windows Server across multiple VM instances

TECHNICAL SKILLS

Cloud Platforms

- Amazon Web Services

Containerization & Orchestration

Docker, Kubernetes (K8s)

IaC & Configuration Management

Terraform, Ansible

Monitoring & Logging

Prometheus, Grafana

Operating Systems

Linux, Bash

CI/CD

Jenkins, GitHub Actions

Version Control

Git, GitHub

Networking

TCP/IP, VLANs, OSPF, DHCP, Subnetting
